

Test de accesibilidad de google:

Inicio:

The screenshot shows the Filamentopía website's homepage. On the left, there's a large banner with the text "Descubre los mejores filamentos para tus impresoras 3D con Filamentopía". Below the banner, there's a video player with a play button. On the right, the DevTools Lighthouse audit results are displayed. The overall score is 94. The report includes sections for NAMES AND LABELS (warning: Buttons do not have an accessible name), AUDIO AND VIDEO (warning: <video> elements contain a <track> element with kind="captions"), and ADDITIONAL ITEMS TO MANUALLY CHECK (10). There are also sections for PASSED AUDITS (20) and NOT APPLICABLE (35).

Conclusiones:

① Botones sin nombre accesible

- **Problema:** Algunos botones no tienen un nombre accesible (texto visible o un `aria-label`).

Solución: Agregar texto dentro del botón o usar `aria-label`.

```
<button aria-label="Enviar formulario">✓</button>
```

O si usas un ícono sin texto:

```
<button aria-label="Cerrar ventana">
  <i class="fas fa-times"></i>
</button>
```

② Los elementos `<video>` deben tener subtítulos (`<track>`)

- **Problema:** Los videos en nuestra página no incluyen subtítulos.

Solución: Usa un archivo `.vtt` con subtítulos:

```
<video controls>
  <source src="video.mp4" type="video/mp4">
    <track src="subtitulos.vtt" kind="captions" srclang="es" label="Español">
</video>
```

Empresa/Tienda: (mismo resultado)

✓ Encabezados no están en un orden secuencial correcto

- **Problema:** Los títulos `<h1>`, `<h2>`, `<h3>`, etc., no siguen un orden lógico.
- **Impacto:** Los usuarios con lectores de pantalla pueden tener problemas para entender la jerarquía del contenido.
- **Solución:**
 1. Asegurarnos de que `<h1>` sea el título principal.
 2. Usar `<h2>` para secciones principales y `<h3>` para subsecciones.
 3. No saltar niveles (ejemplo: no usar `<h3>` sin antes tener un `<h2>`).

Ejemplo correcto:

```
<h1>Tienda de Filamentos</h1>
<h2>Categorías</h2>
<h3>PLA</h3>
<h3>ABS</h3>
<h2>Ofertas</h2>
<h3>Descuentos</h3>
```

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app. [Manual testing](#) is also encouraged.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

- Interactive controls are keyboard focusable
- Interactive elements indicate their purpose and state
- The page has a logical tab order
- Visual order on the page follows DOM order
- User focus is not accidentally trapped in a region
- The user's focus is directed to new content added to the page
- HTML5 landmark elements are used to improve navigation
- Offscreen content is hidden from assistive technology
- Custom controls have associated labels
- Custom controls have ARIA roles

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

CONTRAST

- ▲ Background and foreground colors do not have a sufficient contrast ratio

These are opportunities to improve the legibility of your content.

NAVIGATION

- ▲ Heading elements are not in a sequentially-descending order

These are opportunities to improve keyboard navigation in your application.
